

dream machine: the new creative economy is the field guide to the most consequential year in creative work since cinema learned to talk. written from inside the work by creative technologist pete woodbridge, this book is not just a tools guide or a five-point manifesto. it is a careful, public record of an industry coming apart and putting itself back together.

drawing on his vantage point running a studios in the north west of england and publishing a weekly newsletter for thousands of creatives, woodbridge holds the whole picture together in a way no platform-company keynote or academic has managed.

whether you are a working creative trying to figure out what to do on monday morning, a studio leader making organisational decisions, or a policymaker setting the rails for the future, this book provides the frameworks you need to stay oriented in a fast-moving environment.

creative work is being re-platformed. the choices made right now will set the terms for the next decade.
